

**Check if a person can drive based on age and vision**

```
#include<iostream>
```

```
age = int(input("Enter your age: "))
```

```
if age >= 18:
```

```
    vision = input("Do you have good vision?  
(yes/no): ")
```

```
    if vision == "yes":
```

```
        print("You can drive.")
```

```
    else:
```

```
        print("You cannot drive due to poor vision.")
```

```
else:
```

```
    print("You are not old enough to drive.")
```
